**Give your business  
the competitive advantage**

# 6G Internet's Technology

*Superfast wireless broadband providing speeds from 10Mbps to 10Gbps\**

6G internet's Air Fibre is a forward thinking wireless communications solution built using technology pioneered by the military to communicate with unmanned aerial vehicles for critical missions during severe conditions. Now refocused and available for businesses, 6G internet offers faster, secure and cost-effective business broadband.

## ***Cutting edge technology***

6G internet uses a combination of the latest in radio and fibre optic technologies. We deliver the internet through the air via line-of-sight point-to-point, which means we don't have to rely on copper cables or limit our speeds on how far your business is away from the exchange.

## ***You choose your speed!***

6G internet's Air Fibre is a completely different, future-proof wireless solution which allows you to choose your speed and not put up with what's available in the area. 6G internet offers fast, secure and cost-effective business broadband that puts you in control of the speed you receive based on your package.

## ***Fast deployment***

With 6G internet, gone are the days where you had to wait for providers to dig up roads. We aim to have you up and running in days from ordering.

*\* Dependant on package*

# How does 6G internet compare with traditional broadband?

*6G internet has the benefit of building a brand new network so we do not suffer from any of the legacy issues.*

## ***Traditional Broadband***

Legacy telephone wiring pushes shared broadband on a longer, less direct journey resulting in slower speeds and less stability. Off-net sites often see roads being dug up.

Because 6G internet bypasses diverted journeys through wires and exchanges, our speeds are highly competitive. You get the speed and service you want.

## ***6G Internet***

Super fast and secure next generation internet sent over ground through the air direct to users via point-to-point, bypassing diverted journeys through copper wires and traditional exchanges.

# Why Connect with 6G Internet

*Give your business the competitive Advantage that it deserves.*

Customers can have whatever speed and capacity they want\* they are no longer restricted by a provider's infrastructure or how far they are from the exchange.

Since the signals are transmitted through the air, there is no question of the quality of material used such as the quality of copper wire. This is irrelevant with radio technology.

The installation is quick, hassle-free and the service is flexible meaning you can easily upgrade your speed up to 10Gbps! 6G internet packages are completely scalable with guaranteed QOS to suit various business needs.

6G internet provides you with a complete communications solution. All sizes of business, whether big or small, can benefit from our communications system. We cater for basic internet and phone line packages to complete office networks, all delivered with great speed and efficiency.

We have invested heavily in the installation of a high speed network. If you are in a poor connectivity area we can provide high speed internet through our point-to-point radio network.

Furthermore, we can quickly connect businesses to our network, without relying on local infrastructure and underground cabling.

A background network diagram consisting of numerous light blue circular nodes connected by thin, light blue lines, forming a complex web-like structure across the entire page.

# GROW YOUR BUSINESS WITH 6G

6G is delivering reliable, high quality superfast internet connections to business across the UK.

With 6G you can increase your bandwidth as your business grows, and embrace cloud communication like never before.
